

Linux DevOps Commands Reference Guide

1. File & Directory Management

ls -la

pwd

cd /path

cp source dest

mv old new

rm -rf file

mkdir -p dir

find / -name file

locate filename

2. Permissions & Ownership

chmod 755 file

chown user:group file

umask

getfacl file

setfacl -m u:user:rwx file

3. Process Management

ps aux

top

htop

kill -9 PID

pkill process

nice -n 10 command

renice -n 5 PID

4. Disk & Memory

`df -h`

`du -sh *`

`lsblk`

`mount`

`free -m`

`vmstat 1`

`iostat -xm 1`

5. Networking

`ip a`

`ip r`

`ping host`

`ss -tulnp`

`netstat -tulnp`

`curl http://localhost:8080`

`wget url`

`traceroute host`

`nslookup domain`

6. Log Monitoring

`tail -f file.log`

`less file.log`

`grep 'ERROR' file.log`

`awk '{print $1}' file`

`sed 's/old/new/g' file`

7. System Services

`systemctl status service`

```
systemctl start service  
systemctl stop service  
systemctl restart service  
systemctl enable service
```

8. Users & Groups

```
useradd username  
passwd username  
usermod -aG group user  
groupadd groupname  
id username
```

9. SSH & Security

```
ssh user@host  
ssh-keygen  
scp file user@host:/path  
chmod 600 ~/.ssh/authorized_keys
```

10. Compression & Archiving

```
tar -cvf file.tar dir  
tar -xvf file.tar  
tar -czvf file.tar.gz dir  
gzip file  
unzip file.zip
```

11. Environment & Variables

```
env  
printenv  
export VAR=value
```

echo \$VAR

12. Monitoring & Troubleshooting

uptime

watch command

dmesg

journalctl -xe

history
